**Group W5:**

P. Makridis & Associates

planting consultant: garden center Vassiliadis

\_reaching the site

Thessaloniki

Municipality of Triandria

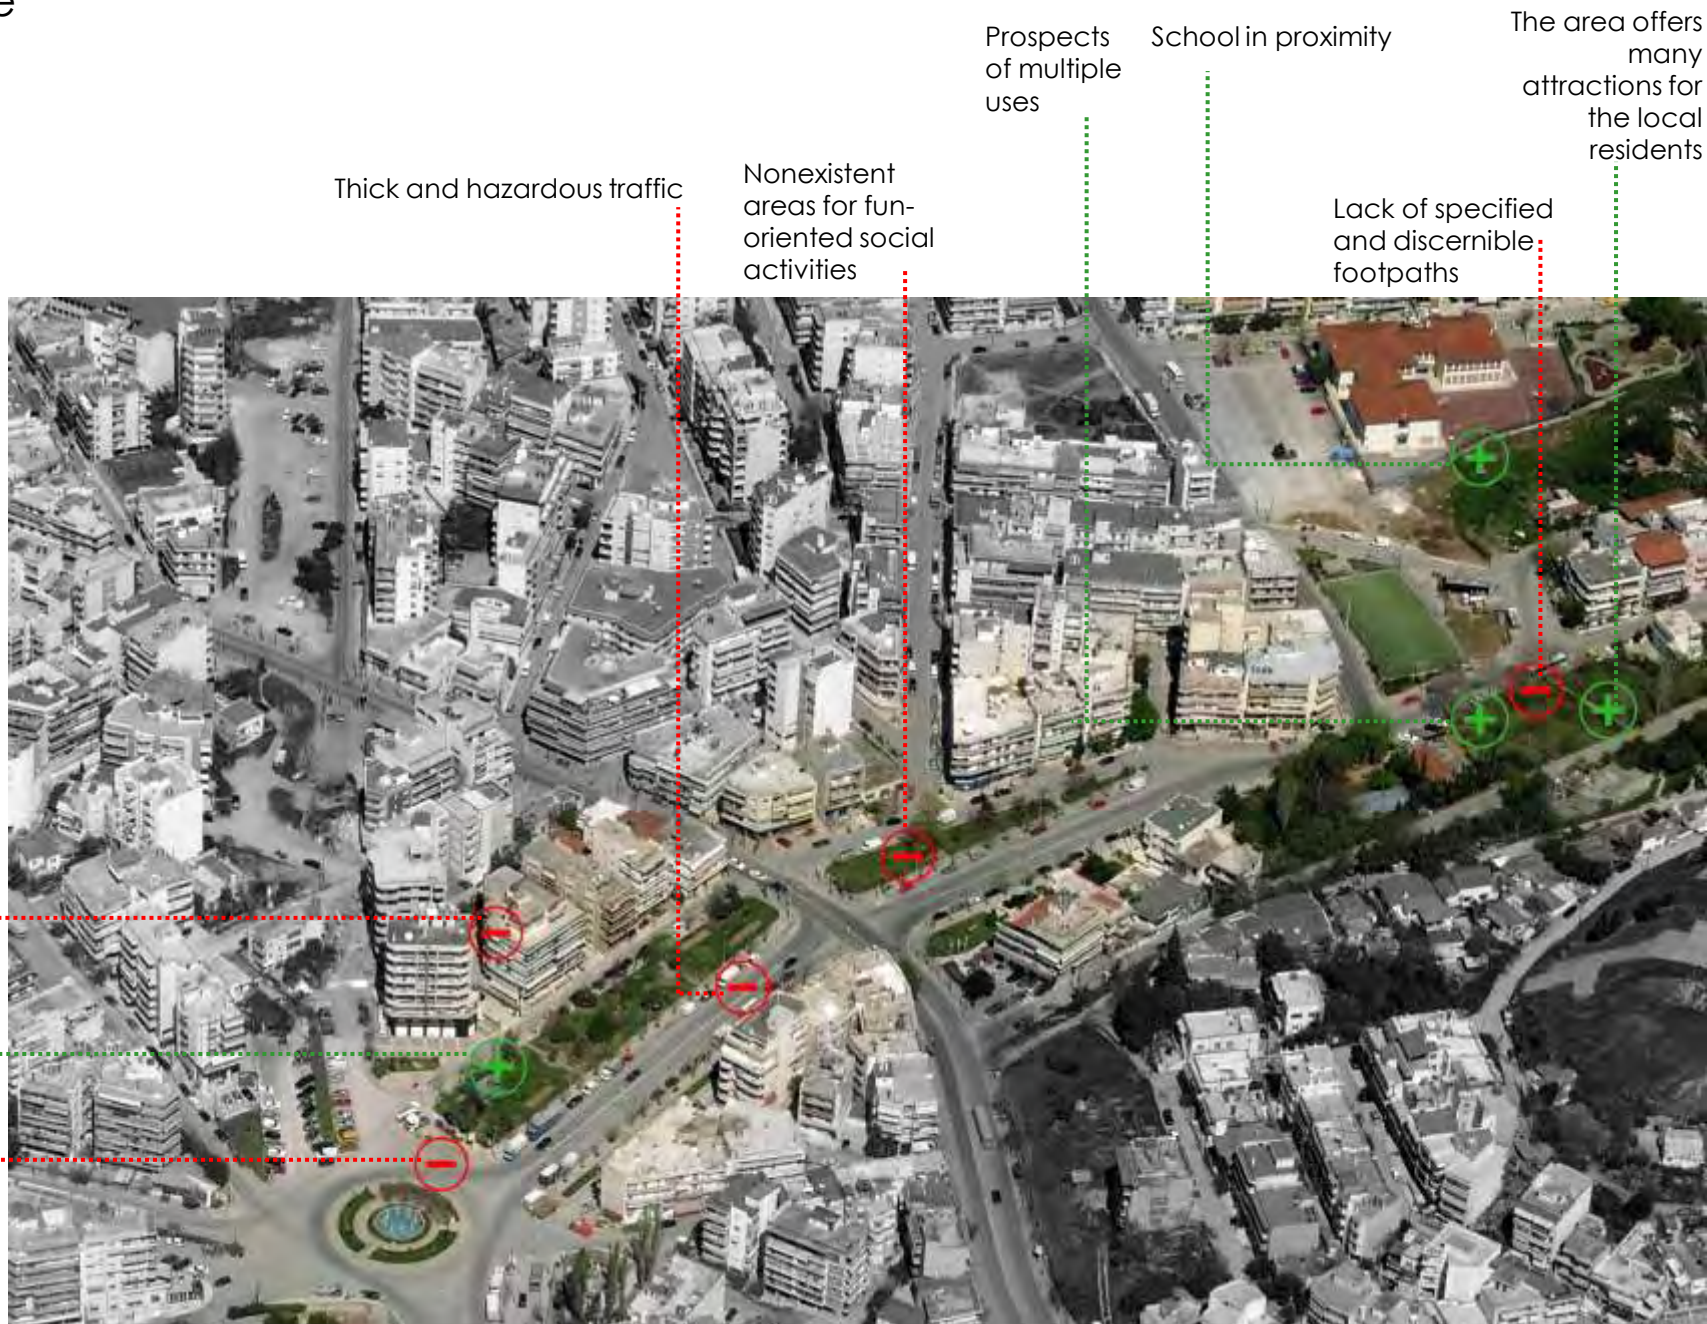

Amouliani street

Design area

# \_analyzing the site

Prospects of multiple uses

School in proximity

The area offers many attractions for the local residents

Thick and hazardous traffic

Nonexistent areas for fun-oriented social activities

Lack of specified and discernible footpaths

Dense / strict urban web

Neglected green areas

Limited accessibility for pedestrians

\_re-use a material

- recognition and the promotion of the attributes of the space
- mobilization of the residents for attendance in the application of our proposals, in order to make the environment of the city more viable

## Why “tire”?

- promoting recycling and **reuse** industrial products for mass production **in alternative use and functions**, which differ from their initial usage. Car tires rarely serve alternative functions!

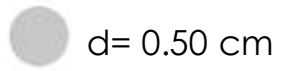

- the **symbolic meaning** behind the object is strong:

Usage of car tires → is relevant to urban environment's pollution  
→ reveals the dominant use of cars  
→ annotates the production and consumption of chemical products (plastics, rubber)

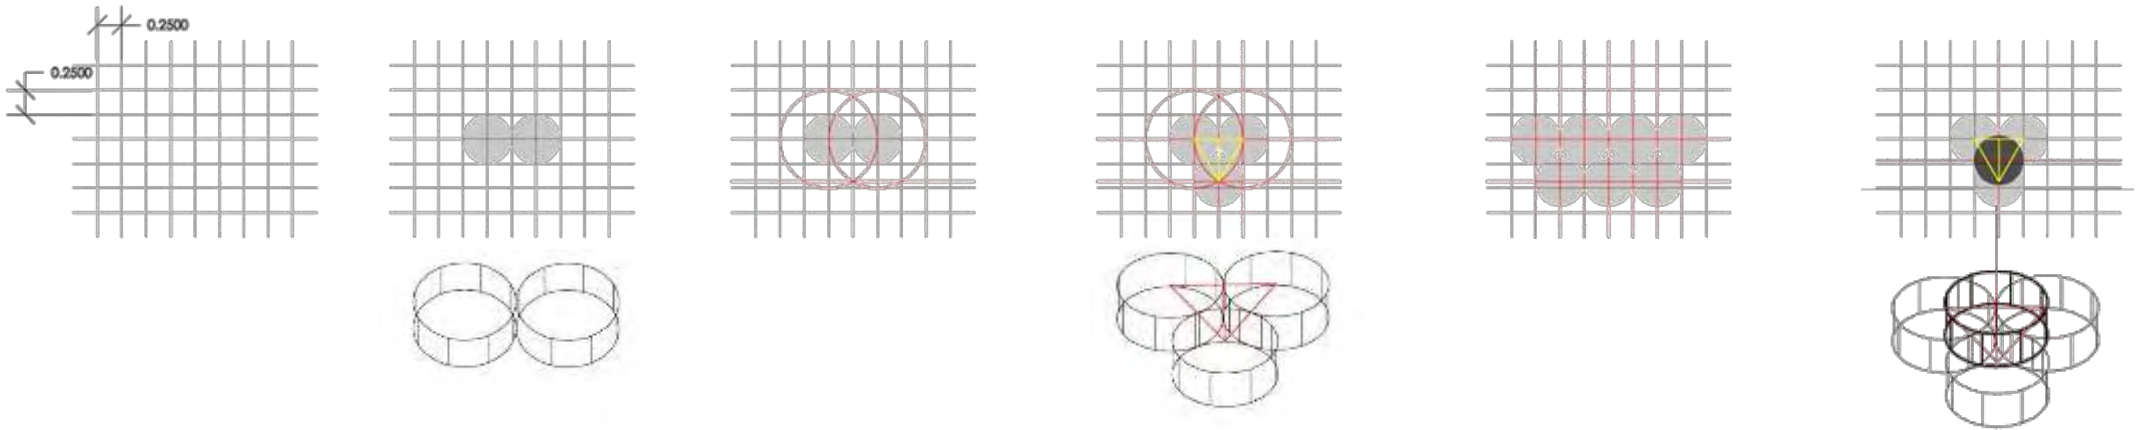

# \_component + system

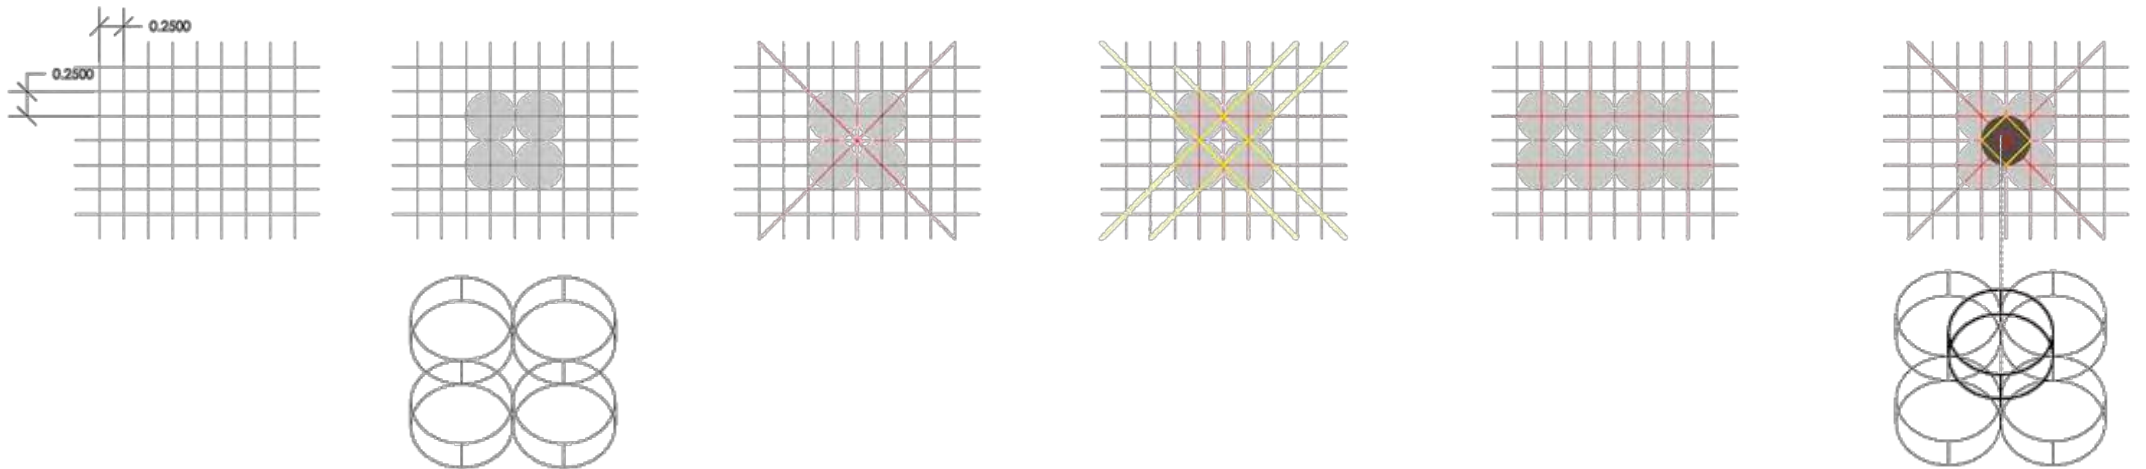

component:  
tire

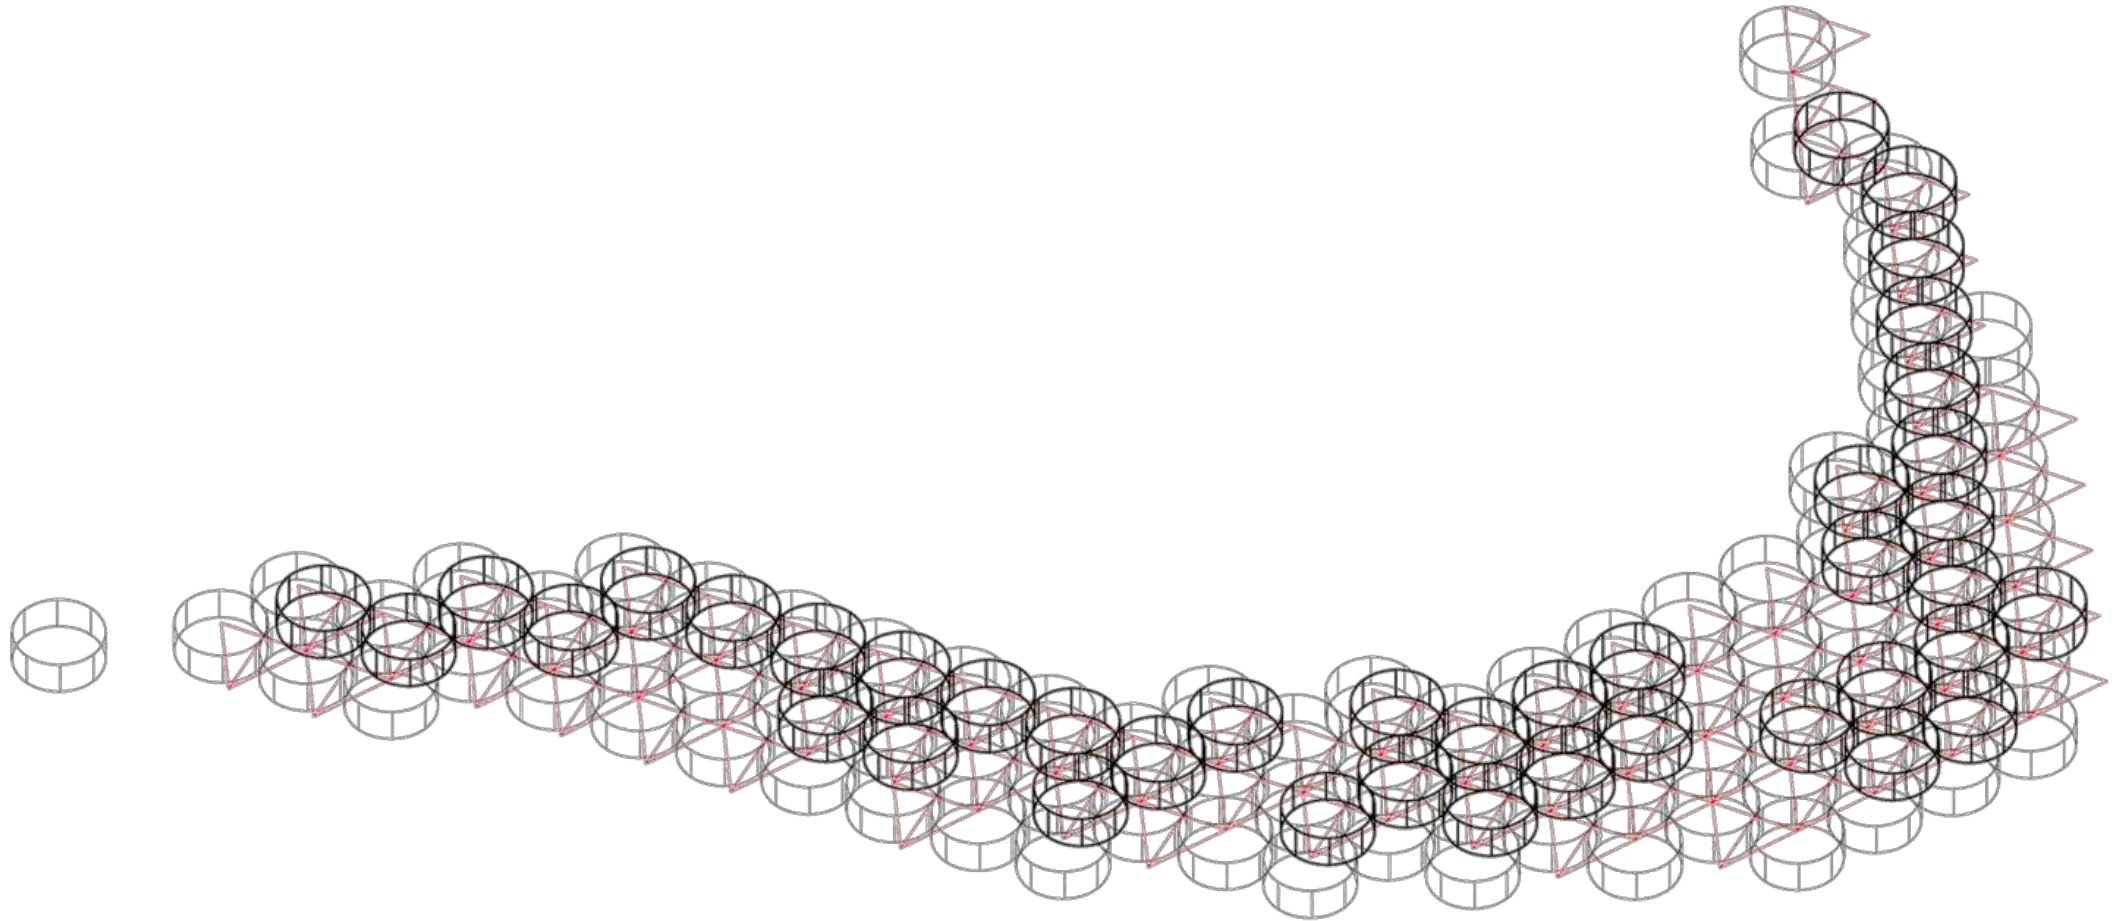

## case 1

## case 2

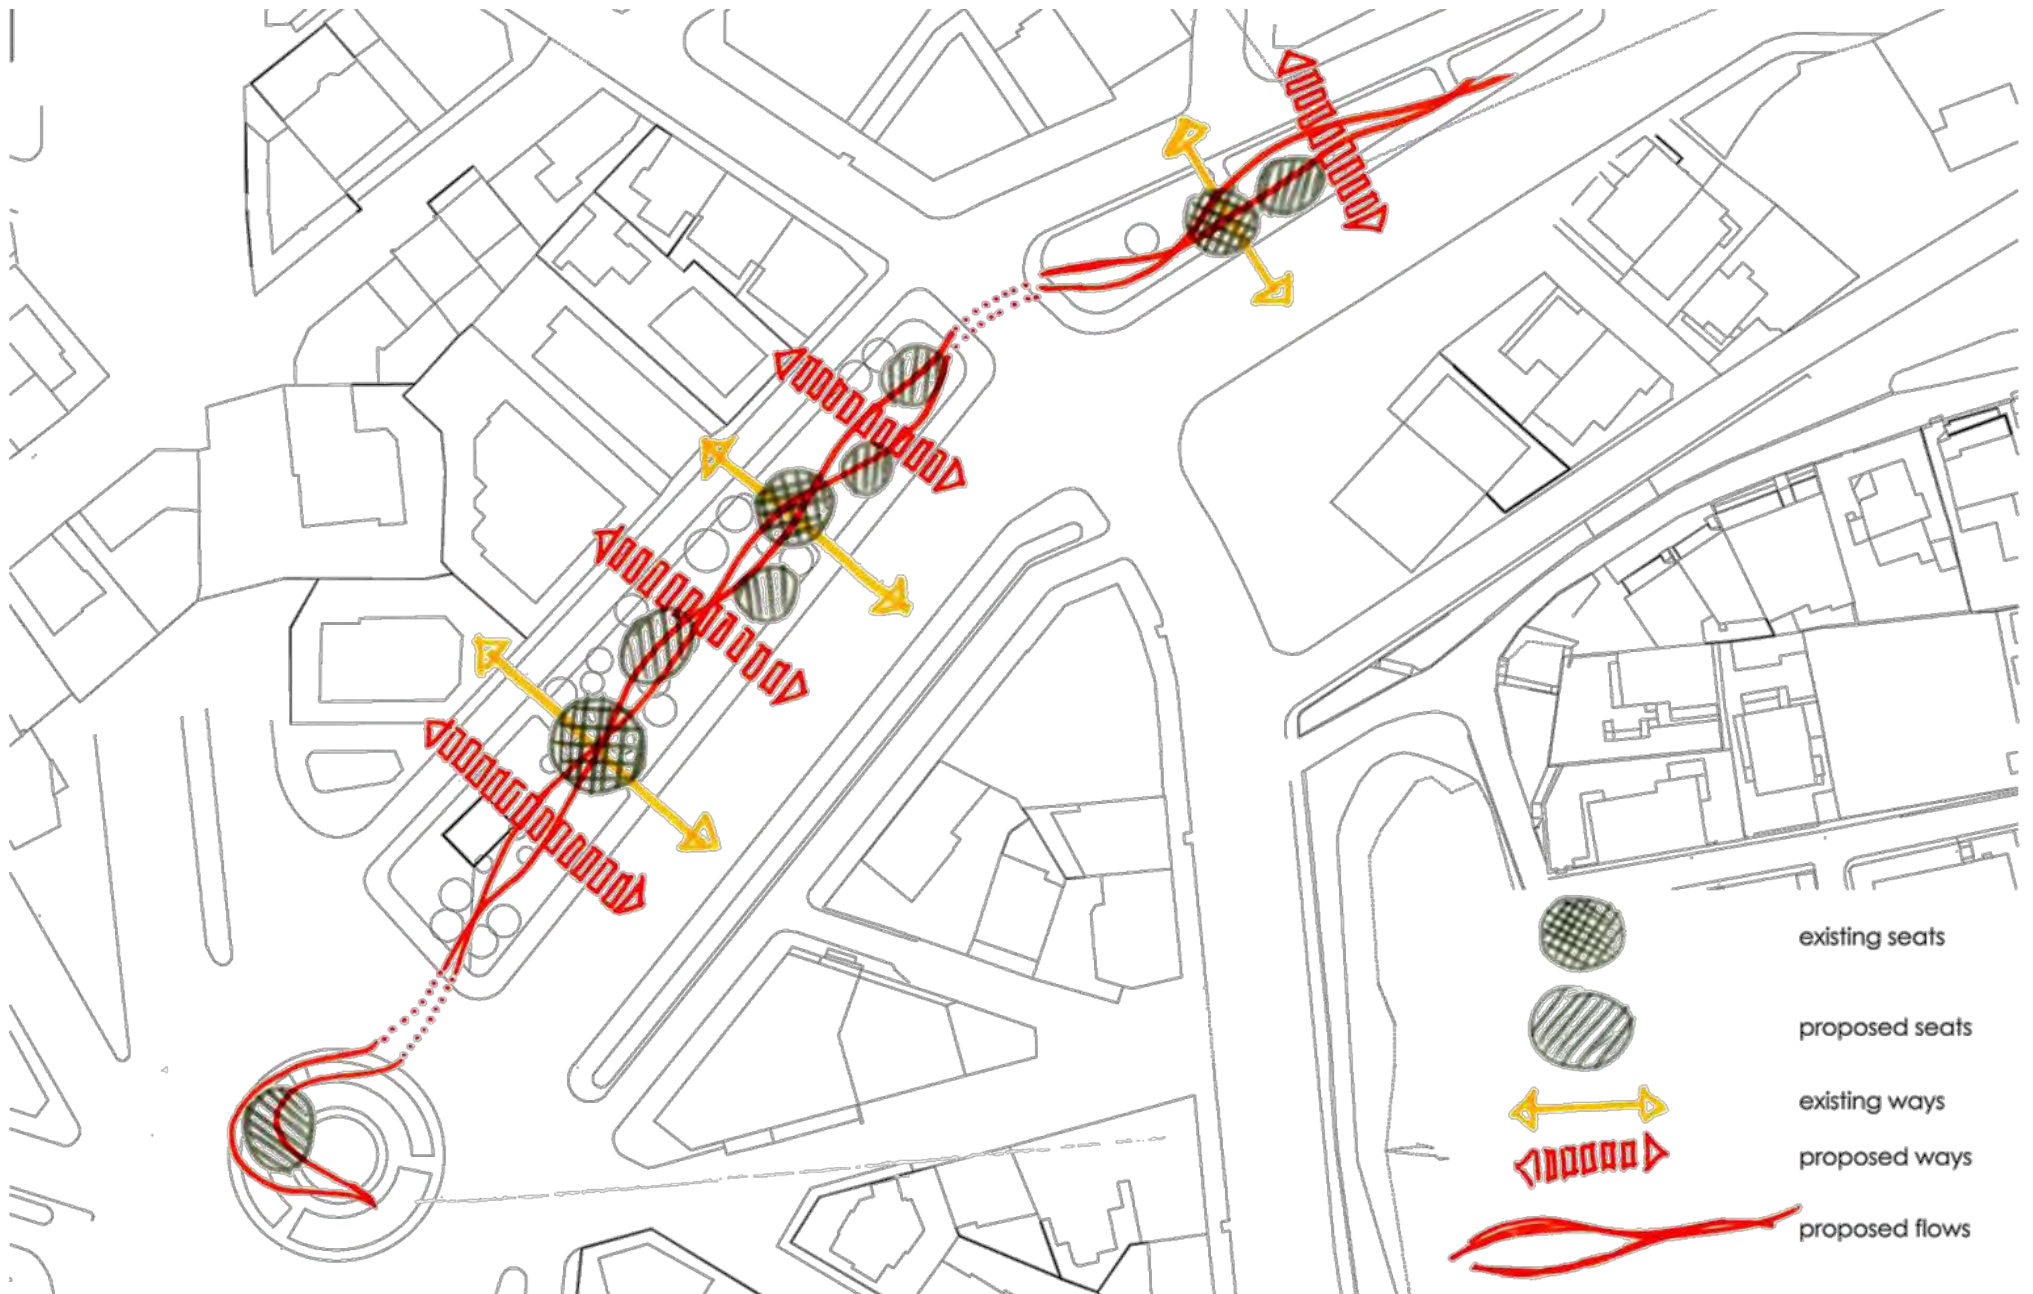

# \_proliferation of component case 1

\_case study

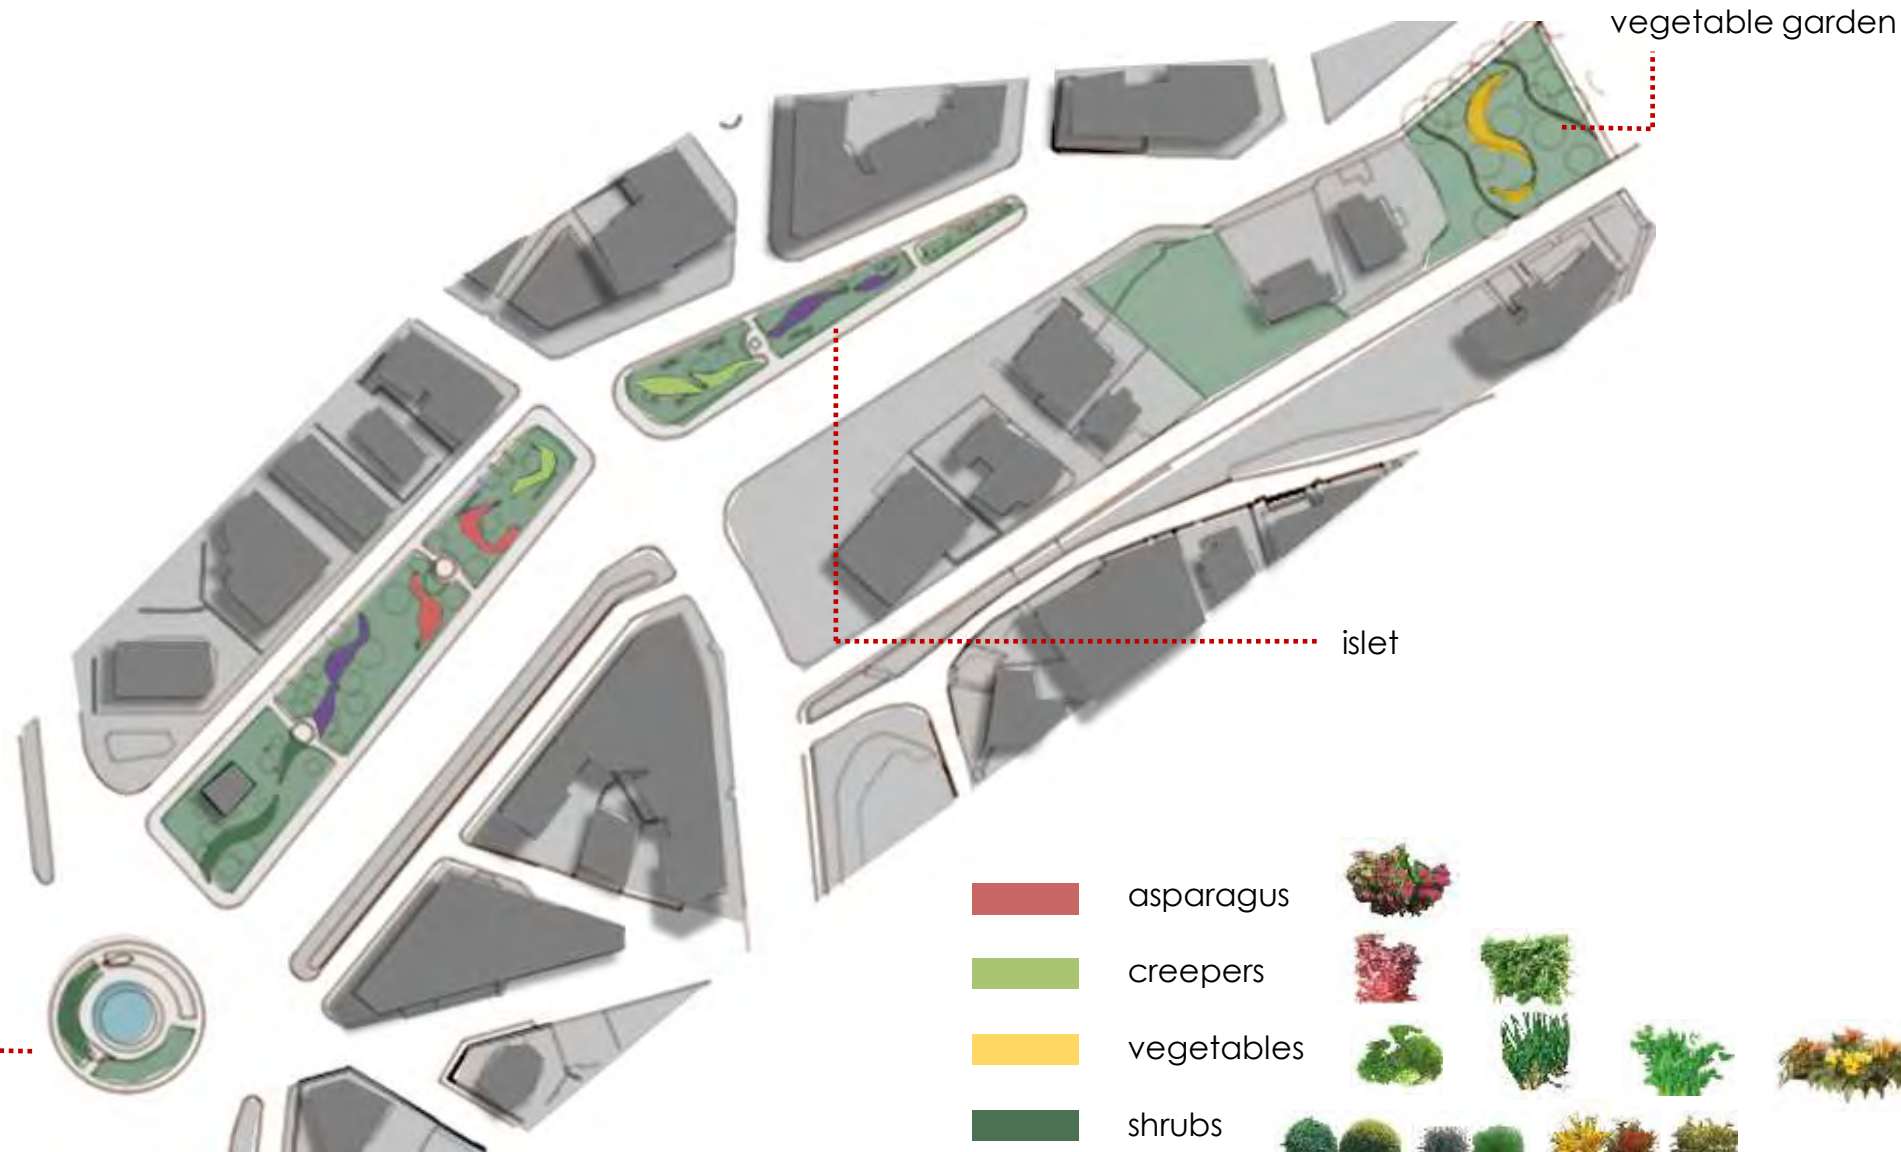

\_master plan

\_diagram of planting

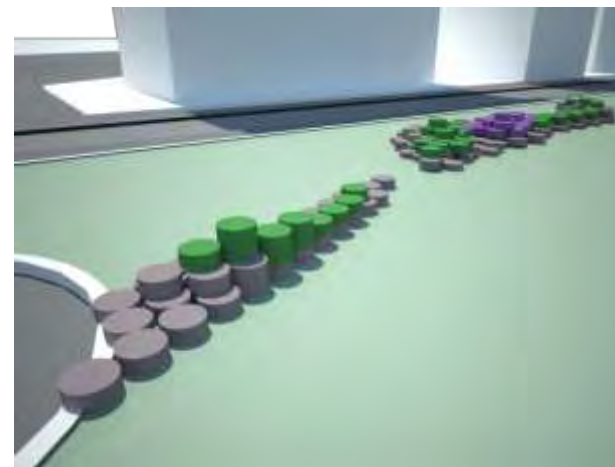

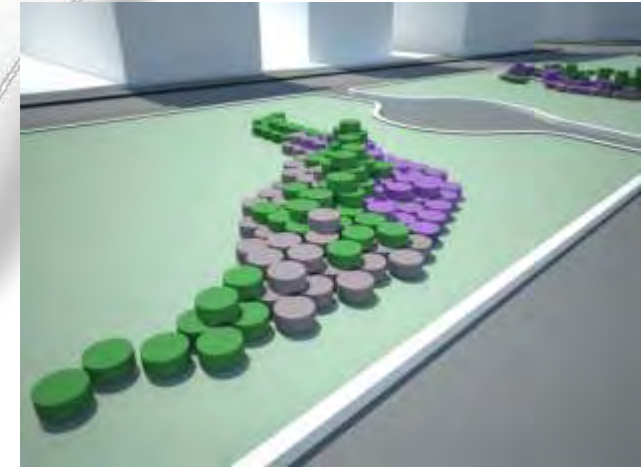

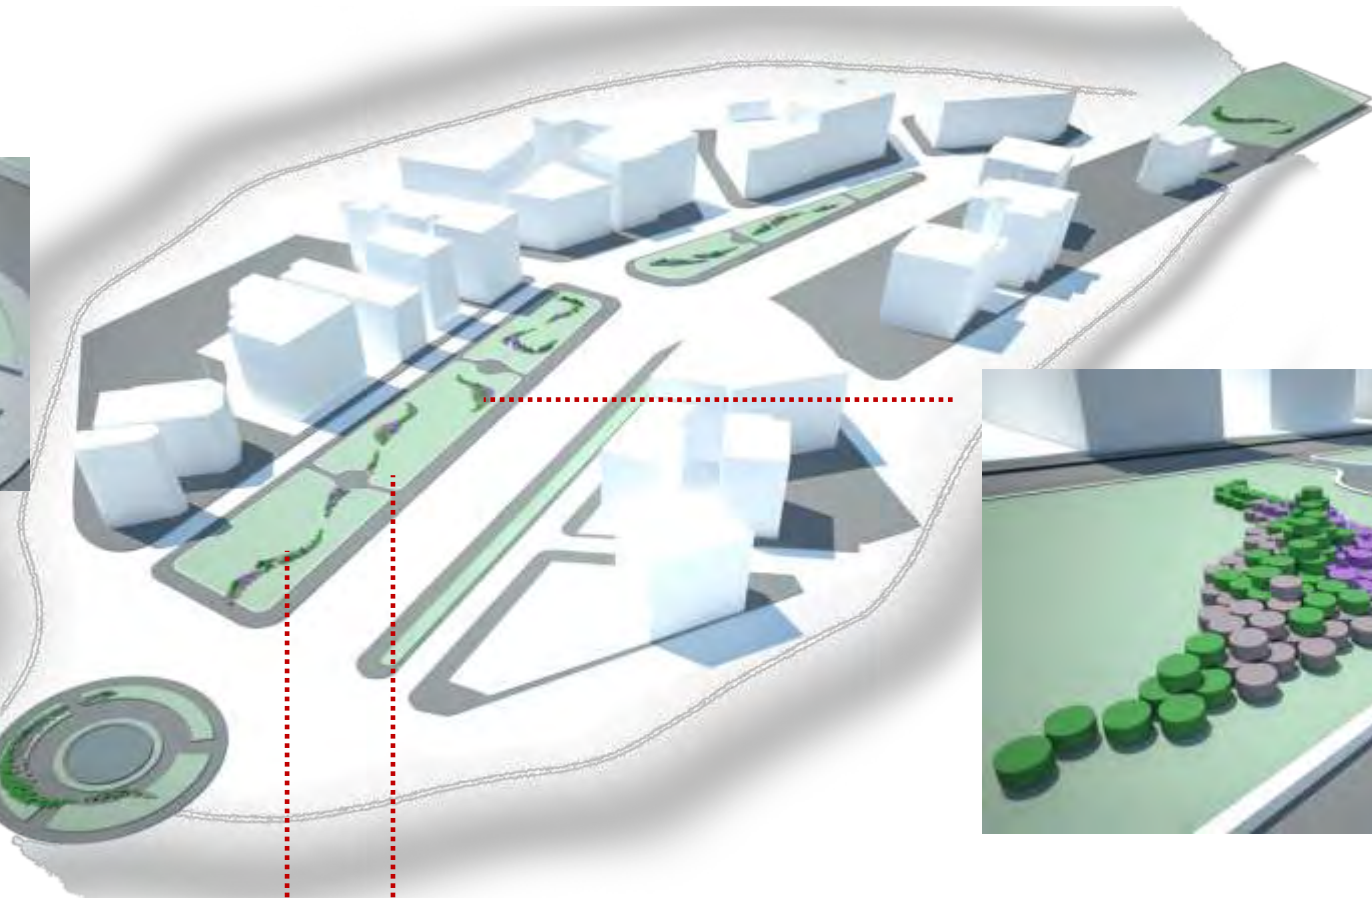

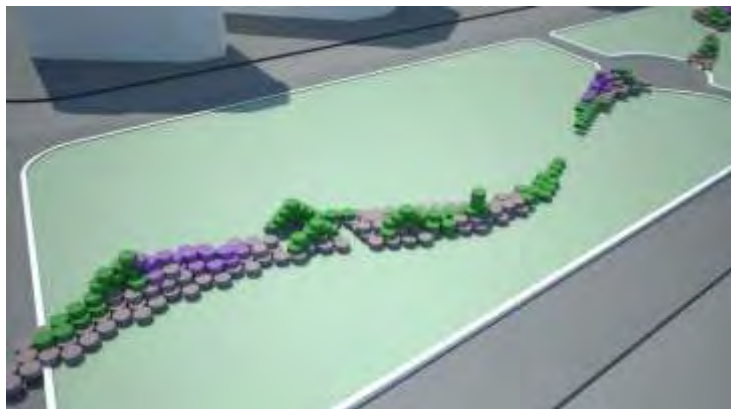

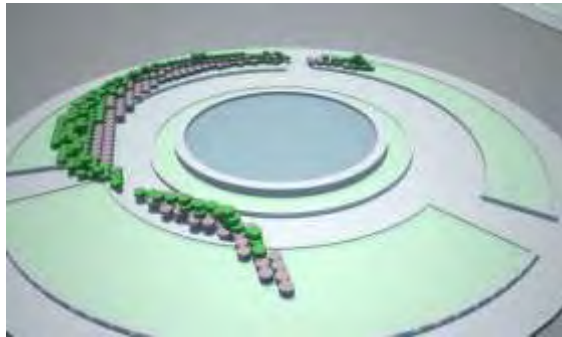

round-about

vegetable garden

islet

- asparagus
- creepers
- vegetables
- shrubs
- herbs

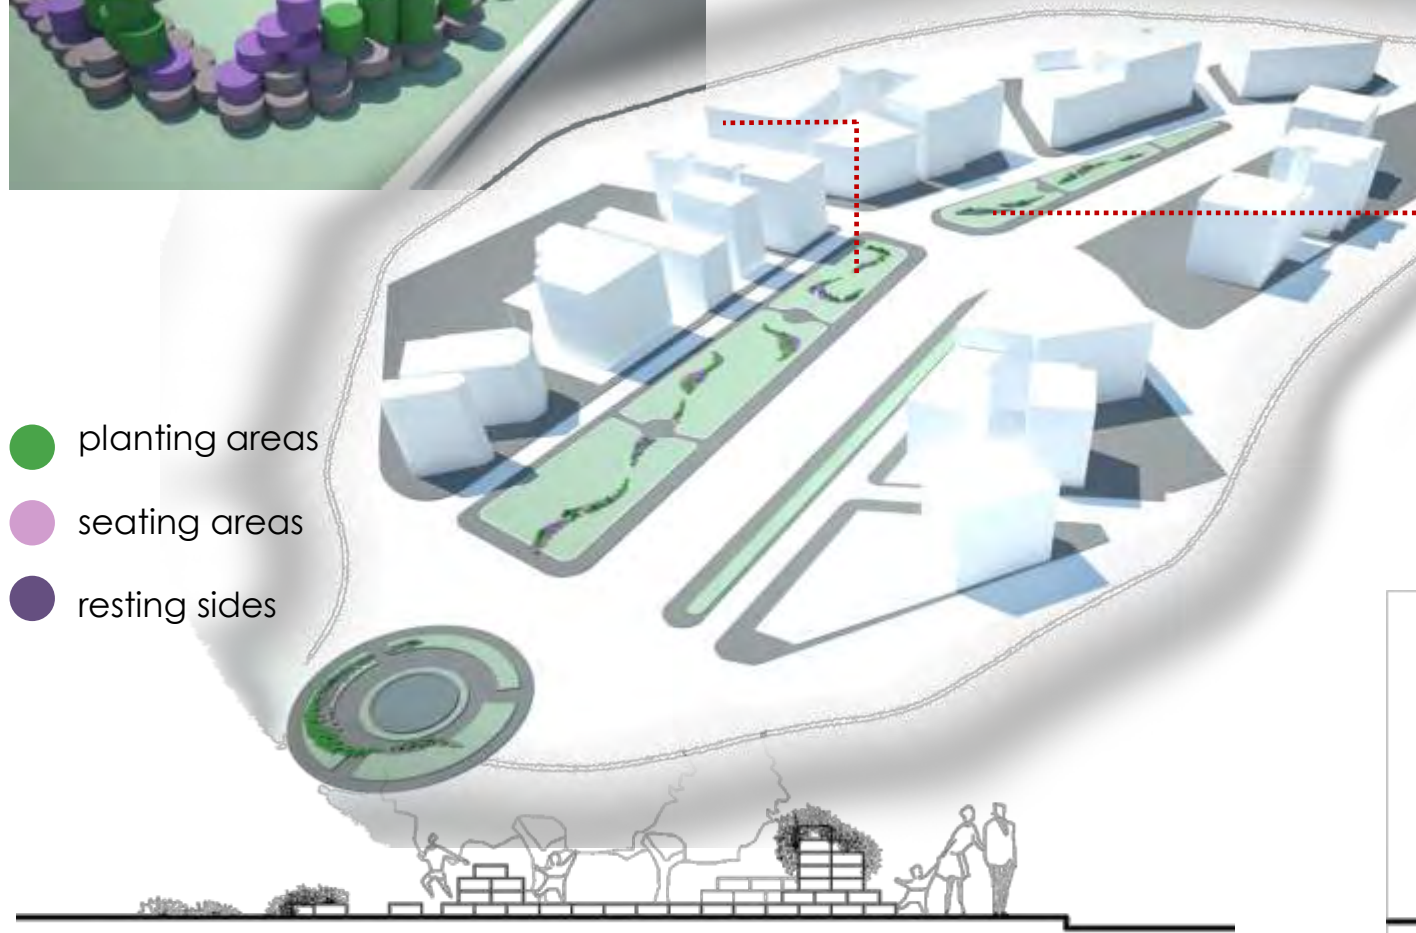

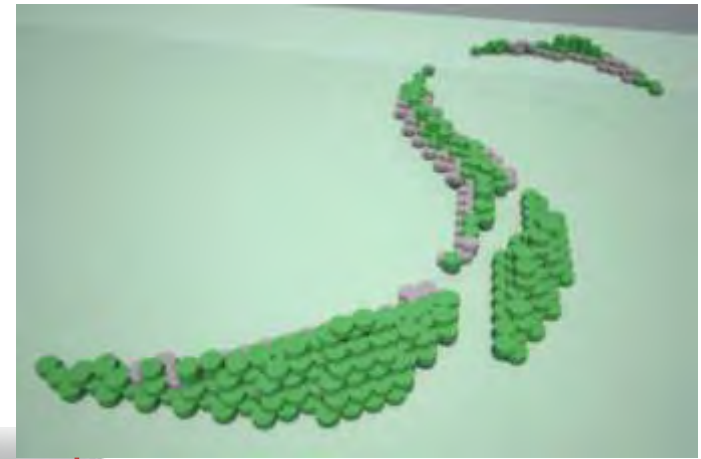

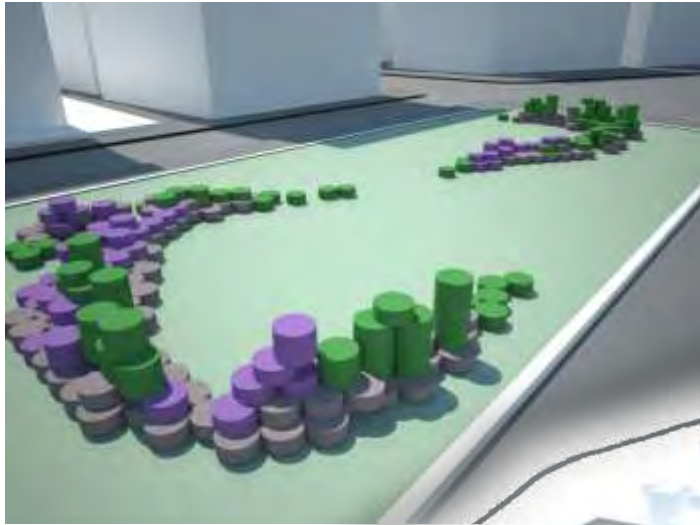

\_ uses

- planting areas ●
- seating areas ●
- resting sides ●

\_ uses

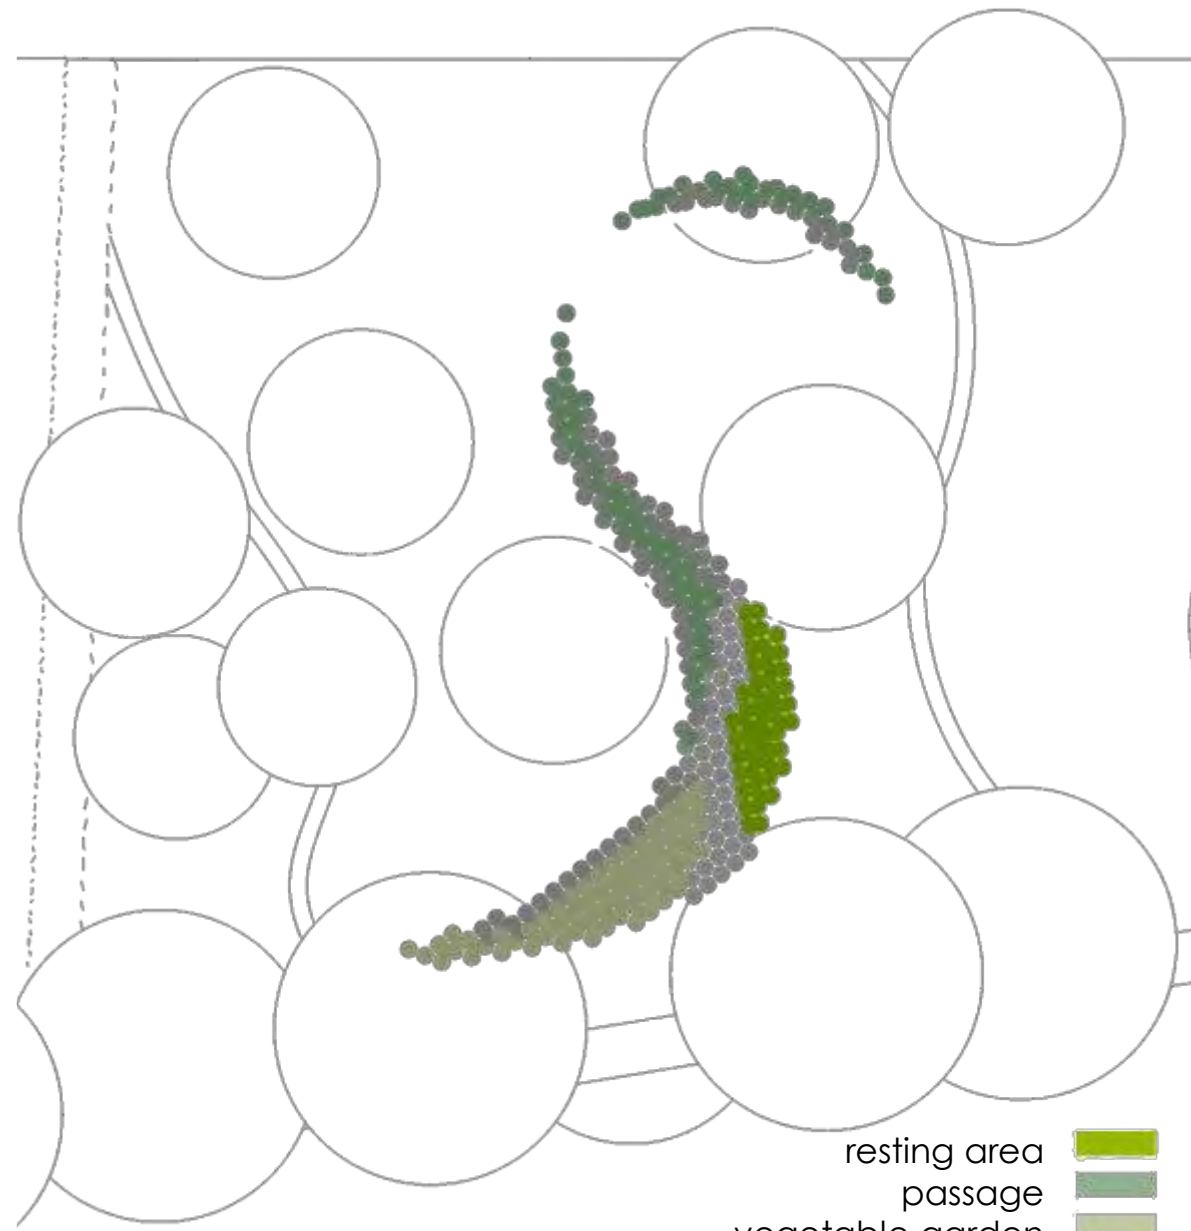

- planting areas
- seating areas
- resting sides

\_in situ installation

- resting area
- passage
- vegetable garden
- bushes
- aromatic plants
